

Invigor8 Plus

Seed treatment for corn, grains, and more with a biological boost

Seed Treatment With A Biological Boost

Invigor 8+ is our corn seed treatment formula with a biological component for even stronger results. The Invigor 8+ formula contains free-living microorganisms that help with seed germination and early vigor. Invigor 8+ can increase seed germination rate and fortify your seeds against initial acclimatization stress. This helps maintain better, more uniform stands with well-rounded development both below and above the ground. We typically see yield increases of between 3-5% with Invigor 8 and even better results with Invigor 8+ depending on use, environment, and soil conditions.
